

By now, I'm sure you've heard of Bitcoin. Maybe even Litecoin and Ethereum. And watched as they've all seen enormous price increases over the past few years.

I want to introduce you to **NewYorkCoin (NYC)** which is also a digital currency but is virtually unknown and has not yet experienced the explosive price growth of many of its peers.

NewYorkCoin launched on March 6th, 2014 with no pre-mine, no developer/investor holdbacks or any other shenanigans. NYC is true cryptocurrency – decentralized worldwide peer-to-peer network with virtually no fees. Offering ultra-fast 30 second transaction confirmations (vs 10+ minutes for Bitcoin).

NYC is useable when other cryptos are not practical. NYC block explorer (full transaction ledger from 1st transaction to most recent) is open-source and available for anyone to view.

NewYorkCoin currently trades on only 1 major online cryptocurrency exchange (YoBit) and is valued at a small fraction of one cent each. NYC is currently a virtual unknown, but that's all about to change!

FREE GIFT TO YOU: 10,000,000 NewYorkCoin (NYC)

(available to only 100 New York City storefront business owners/managers)

The only thing NYC asks in return is for you to post a small NewYorkCoin sticker on the front door of your business to promote awareness of NYC. You will become a vested owner of NewYorkCoin and we will all participate in her future success.
