

I'm sure by now you've heard of [Bitcoin](#). Maybe even Litecoin, Ethereum and Dash. And watched as they've all seen **enormous** price increases over the past few years.

I want to introduce you to NewYorkCoin (NYC) which is also a digital currency but is virtually unknown and has not yet experienced the explosive price growth of many of its peers.

NewYorkCoin launched on March 6, 2014 with no pre-mine, developer/investor holdbacks or any other shenanigans. NYC is true cryptocurrency - decentralized worldwide peer-to-peer network with virtually no fees. Offering ultra-fast 30-second transaction confirmations (vs 10+ minutes for Bitcoin). NewYorkCoin is useable when other cryptos are not practical.

NYC block explorer (full transaction ledger from 1st transaction to most recent) is open-source and available for anyone to view at nycoin.net

NewYorkCoin currently trades on only 1 small online cryptocurrency exchange and is valued at a small fraction of one penny each. That's all about to change!

FREE GIFT TO YOU:

10 MILLION NewYorkCoin (NYC)

(available to only 100 New York City retail store-front businesses)

The only thing we ask in return is for you to post a small NewYorkCoin sticker on the front door of your business to promote awareness of NYC. You will become a vested owner of NewYorkCoin and we can all participate in her future success.

Email nycoinfoundation@gmail.com for NewYorkCoin wallet download and install instructions.
